

## IVX WORKFLOW

# Enhance Safety, Efficiency, and Compliance in Sterile Compounding

Health systems are continuously being challenged to ensure IV preparations are prepared safely and accurately while complying with increasingly complex regulations. Omnicell® IVX Workflow is a revolutionary IV workflow solution designed to address the critical and evolving challenges of sterile compounding – today and into the future.

Designed for easy placement within laminar airflow (LAF) hoods or isolators, IVX Workflow is a compact all-in-one package that incorporates integrated barcode scanning, gravimetric or volumetric verification, advanced image recognition, photo documentation, and label printing. It supports best practices in aseptic technique by providing step-by-step instructions to guide technicians in preparing IV doses according to set protocols – safely, accurately, and repeatedly.

## Limited Touches for Greater Efficiency

IVX Workflow is designed to limit touches – automatically advancing the technician through the compounding process while limiting physical interaction such as touching a button, clicking a mouse, or pressing a foot pedal.

## Key Benefits

- Enables alignment with best practice recommendations<sup>1</sup> through flexible gravimetric verification
- Drives efficiency and streamlined technician workflow with all-in-one design
- Optimises pharmacist's time with streamlined remote verification of admixtures

## IV Compounding Management

IVX Workflow is powered by Omnicell IVX Manager, a software suite designed to manage all aspects of IV compounding workflow operation across a hospital or health system. IVX Manager supports comprehensive formulary and orders management, enabling:

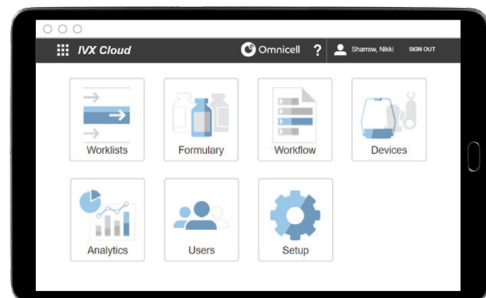

- Flexible workflow design to create risk-based workflows
- Remote pharmacist checking
- Robust reporting and analytics to drive optimisation and efficiency
- Integration with pharmacy and hospital information systems
- Enables compliance through automated documentation, allowing for easily retrievable digital records

IVX Workflow

## The Omnicell Central Formulary (OCF)

The OCF is a cloud-based database providing essential compounding data for medications. Serving as the foundation for building site-specific formularies to be used with IVX Workflow, OCF optimises safety, compliance, and efficiency in pharmacy operations.
